## Library

With the abundance of compliance-related standards, healthcare organizations must gather, maintain, update, and store huge amounts of process documentation. Ensuring this documentation is available, centralized, and accessible to appropriate personnel always requires focus and attention to detail.

The Library module provides on-demand access capabilities, a searchable document repository, a “content vault” of pre-populated templates, and best practices. These features drastically reduce the amount of time needed to manage your documentation, so your staff can use their time for more urgent needs.

The searchable document repository contains all documentation stored throughout eCMS. The Library contains pre-populated policies and procedures, forms, logs, and tools which your organization can customize as needed. Each template is automatically updated and deployed to all clients by EoScene support staff, ensuring the most recent compliance standards are available.

The labor-saving tools in the Library allow your staff to spend more time analyzing information and making informed decisions, and less time merely collecting information.

### Features & Benefits

- Access documentation on demand from a centralized, interactive repository
- Quickly retrieve documentation with searchable fields and related keywords
- Immediately use any of 100's compliance-based templates from the library
- Get the most recent set of compliance standards per The Joint Commission automatically
- Create custom forms with a step-by-step wizard, and relate them to performance elements
- Easily search for a view actual standard language.
- Include other compliance-related data to provide additional levels of compliance detail
